2000Charge adds TaiwanPay WebATM

Alternative billing solution provider 2000Charge has added the TaiwanPay WebATM payment service to their 2009 product lineup.

Taiwan WebATM payment solution is a payment system which allows Taiwan consumers to be able to purchase in real-time via e-banking transfers. TaiwanPay currently accepts all e-Banking transfers from major banks in real-time.

Web ATM is a web service that allows payers to transfer funds directly using a chip-stored identity card and their own card reader. Chip cards are much safer than the magnetic strip variety and as a consequence of this heightened security, Taiwan's banks are now required to replace magnetic strip ATM cards with them.

Transactions made in real time and money collected via TaiwanPay WebATM are risk-free, with no threat of chargeback or returns.

2000Charge has added this payment method, because it is ideal for web merchants as payments made with TaiwanPay WebATM cannot be reversed. As part of the payment process, the consumer is specifically requested to authorize the payment.
